DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 – 10, 20 – 22, and 24 – 25, drawn to a system and method for programming an electronic device, classified in class 710, subclass 1.
 - II. Claims 11 – 14, drawn to a method for preventing a processor circuit from accessing memory, classified in class 710, subclass 36.
 - III. Claims 15 – 17 and 26, drawn to a method for preventing a processor circuit from accessing memory and programming an electronic device, classified in class 710, subclass 6.
 - IV. Claim 18, drawn to avoiding providing address information, classified in class 710, subclass 3.
 - V. Claims 19 and 23, drawn to a data structure used in programming an electronic device, classified in class 710, subclass 30.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II – V are related as combination and subcombinations.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombinations as claimed because the

subcombinations describe details of the data transfer and a data structure used to be used in the data transfer not required in the combination. The subcombinations have separate utility such as data transfer to any kind of device or peripheral.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II, III, IV, or V, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions

Art Unit: 2181

unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
